

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name _____taj and james_____

Your Name _____James Shakespeare_____

Your Team Member's Name _____Taejin Eom_____

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.
 - Iteration 0 (Both did work separately)
 - Iteration 1B
 - Iteration 2B
 - Iteration 3 (as a group together)

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
 - Iteration 0 (Both did work separately)
 - Iteration 1A
 - Iteration 2A
 - Iteration 3 (as a group together)

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

The predetermined iterations to work on separately made it easy to decide who worked on what. One this that was difficult was trying to work on the code at the same time as each other. This is because whenever one of us was done we would have to push and the other would have to pull. Sometimes we would forget, and this would cause loss of progress.

Another issue for both of us was understanding the others code. This was easily worked around through the other team members explanation but could be prevented or mitigated by better commenting during the development.
